What is a ceramic capacitor?

A capacitor is a passive electronic device that stores electric charge. Ceramic capacitors consist of two or more alternating layers of ceramic material as the dielectric and metal layers acting as the non-polarized electrodes. Applications include automotive, bypass, decoupling, filtering, RF, and ESD protection.

What are high-voltage multilayer ceramic capacitors used for?

FREE delivery for orders over \$50.00 Professional range of high-voltage multilayer ceramic capacitors. At high frequencies, these capacitors exhibit low ESR and find conventional use as snubbers or filters in applications. These capacitors are typically used in telecommunications, medical, military and aerospace equipment.

What is a MLCC capacitor used for?

Applications include automotive, bypass, decoupling, filtering, RF, and ESD protection. Through-hole versions are often disc or "blob" shaped with two wire leads while MLCC (Multilayer Ceramic Capacitor) are surface mount. 2000V (2kV) Capacitors - Ceramic Capacitors are in stock at Digikey.

What is the difference between MLCC and through-hole capacitors?

Likewise, the slower the voltage changes the less current will flow. This means then that the reactance of an AC capacitor is "inversely proportional" to the frequency of the supply as shown. Capacitive Reactance. Where: X_C is the Capacitive Reactance in Ohms, f is the frequency in Hertz and C is the AC capacitance in Farads, symbol F. When dealing with ...

The aim of this project is designed to develop a high voltage DC around 2KV from a supply source of 230V AC using the capacitors and diodes in a ladder network based on voltage multiplier concept. The method for stepping up the voltage is commonly done by a step-up transformer. The output of the secondary of the step up transformer increases the voltage and ...
