

## Add rear seat lithium battery

How do I install a battery behind the rear seats?

When installing a battery behind the rear seats of a next-gen Ranger you will need to relocate the jack. We offer a relocation kit which provides a secure and easily accessible alternative mounting position for the jack in the rear corner of the tub - See further details here. Powder coated steel.

How do you install a car battery?

No-drill installation, using original thread inserts and holes in the vehicle cab wall. No cutting of metalwork is necessary. The contoured carpet panel on the back wall must be removed for installation. Once the battery is mounted you may decide to cut the panel and re-fit the remaining parts, but there will be little remaining.

Can You mount a battery behind a next-gen Ranger?

If you're looking to mount another battery, scroll down to the universal solution. Designed to fit a range of lithium batteries behind the seat of a Next-Gen Ranger without the behind-seat speaker, the AusMotion universal mount provides a clean and secure method of installing a wide range of batteries from Australia's leading suppliers including.

How long does it take to install the battery mounting bracket?

Installation of the battery mounting bracket takes around 30 minutes. New bolts included. We can also supply a DCDC charger bracket to mount to the rear wall of the cab - See here for further details. The battery mount includes pre-cut holes for a Victron or iTech Shunt to be installed directly above the battery.
