

Battery cannot be detected when plugged into power source

Why is there no battery detected in Windows 10?

If you see the No battery is detected message in Windows, do not lose hope! It could be a trivial problem and one that's easily fixable. The problem can be caused by outdated drivers, improper connections, and overheating. To fix things, you can update the relevant drivers or install the latest Windows version, amongst other methods, here.

What does no battery is detected mean?

When you come across the No battery is detected message, it means that the computer cannot identify one and is subsequently not drawing power from the battery. But it does in no way imply that there's no battery connected. Most of the time, a fully functional battery is connected but isn't detected due to software or hardware issues.

What to do if no battery is detected in Windows 11?

When coming across the No battery is detected message in Windows 11, your primary approach should be to reconnect the battery and restart the computer. In most cases, these two have helped fix things for users since the underlying cause was a trivial bug or improper connections.

Why is my battery not showing up in the BIOS?

The battery may be out of date and not showing up in the BIOS. However, check your ACPI settings first to make sure the battery is present. To do this, check your ACPI settings first: Right-click Start and select Device Manager. Click on ACPI to check the settings, as the battery may be on or off.

How do I know if my battery is on or off?

To do this, check your ACPI settings first: Right-click Start and select Device Manager. Click on ACPI to check the settings, as the battery may be on or off. Check the BIOS to see if the battery is detected in the BIOS. Note: If you have access to another battery, try it in the computer and see if the problem is with the computer or the battery.

What if my laptop has no battery?

Batteries are a critical component of Windows laptops, as these provide the required power when not plugged into an electricity source. And when users find that no battery is detected, things may go awfully wrong. The No battery is detected message is seen when you hover the cursor over the Battery icon in the right corner of the Taskbar.
