

# Battery production put on hold

Why is Volkswagen putting a battery plant on hold?

Volkswagen is putting on hold a planned battery plant in eastern Europe and prioritising a similar facility in North America after estimating it could receive EUR10bn in US incentives. The decision is the latest fallout from Joe Biden's \$369bn package of subsidies and tax incentives for green technology that is luring European companies to the US.

Why is a power-down on a battery plant a big deal?

The power-down on the proposed plant comes amid a plateau in the global market for battery technology, with a glut of product as demand underperforms expectations. Cleantech projects around the world are being reconsidered, not just in the battery sector but in alternative fuels as well.

Where will a battery factory be built in 2025?

A factory for battery modules and packs with a capacity of 24 GWh and an investment volume of around EUR2 billion was planned in Saarland, while a cell factory with a capacity of 16 GWh was to be built in Brandenburg. Both projects were due to be operational by 2025, but have now been put on hold without any further timetable.

Will a new lithium-ion battery plant create jobs in British Columbia?

A highly-touted expansion in British Columbia's clean technology economy has been put on hold. In November 2023, Prime Minister Justin Trudeau and Premier David Eby announced the billion-dollar expansion to a Maple Ridge lithium-ion battery plant, a project expected to create 350 permanent jobs.

Is a North American battery plant a viable project?

"They have said all along that the project here is a viable project, to have a North American plant dealing with non-car batteries and appliance batteries make sense," he added. The power-down on the proposed plant comes amid a plateau in the global market for battery technology, with a glut of product as demand underperforms expectations.

Where are svolt batteries made?

SVOLT had previously made significant investments in the European market, including planned production facilities in Germany. A factory for battery modules and packs with a capacity of 24 GWh and an investment volume of around EUR2 billion was planned in Saarland, while a cell factory with a capacity of 16 GWh was to be built in Brandenburg.

They wanted to do everything at once -- not just car batteries, but airplane batteries too. In a press release, Northvolt stated that construction on the Heide site is ongoing. The factory, operated by Northvolt Germany -- a separate entity from the parent company -- hasn't filed for creditor protection and aims to start production in late ...

## Battery production put on hold

If you are a few of those who connect the MacBook Pro or MacBook Air to a power source most of the time, you might have got the message "Charging on Hold (Rarely Used on Battery)" or "Battery on Hold" ...

The Volkswagen Group will just build one of the two production lines for battery production at its facility in Salzgitter. The second line has been put on hold amid slowing demand for electric vehicles. That the manufacturer ...

The Volkswagen Group will just build one of the two production lines for battery production at its facility in Salzgitter. The second line has been put on hold amid slowing demand for electric vehicles. That the manufacturer is struggling has become more apparent in recent weeks - and has resulted in a few more changes.
