

China acquires Muscat battery company

Will China see a massive expansion of electric vehicle battery swapping?

Catch up on the developing stories making headlines. Detroit -- China will soon see a massive expansion of electric vehicle battery swapping, as global battery maker CATL said Wednesday it is investing heavily in stations there next year. Battery swapping is not new -- but it's had a challenging journey.

Can an electric car use a battery swapping station in China?

An electric vehicle has to be equipped with the right technology in order to use a battery swapping station, and not many EV models around the world currently allow for swapping. Conversely, an electric car can use any charging station in China because all use a common plug, and fast-charging technology is reducing the time for a recharge.

Will China get into battery swapping?

Catch up on the developing stories from around the globe making headlines. XIAMEN, China -- The world's largest maker of batteries for electric vehicles said Wednesday it will get into battery swapping in China in a big way starting next year. The idea behind battery swapping is to refuel quickly, similar to filling a conventional car with gas.

Why are Chinese companies pursuing alternative batteries not based on lithium?

Lithium technologies are expected to advance quickly over the next few years. However, companies in China and beyond are frantically pursuing alternative batteries not centred around lithium, in part because the minerals needed to make the current options come from just a few countries.

Will battery swapping work in other countries?

Battery swapping is not new -- but it's had a challenging journey. Adoption of electric vehicles has varied in regions across the globe over the past several years, and that doesn't always bode well for building new infrastructure. While the technology could do well in China, it's uncertain whether it could work in other countries.

Will China commercialise a solid-state battery in 2027?

China's CATL is similarly aiming to commercialise its solid-state battery in 2027, but only for small-scale production, the company's chief scientist, Wu Kai, said at an industry forum in April. Large-scale production would continue to face problems such as high production costs, Wu noted.

China-based CATL announced plans to open 1,000 swap stations next year in China, including in Hong Kong and Macao, with a long-term goal of 10,000 stations built with partners. If the company follows through, it could rival Nio, a 10-year-old Chinese electric car brand that has opened more than 2,700 stations and has plans for at least 5,000.

China acquires Muscat battery company

The "squeezed middle" of China's battery supply chain - encompassing precursor, cathode and anode active materials (pCAM, CAM, AAM) - is facing profound challenges to their profitability and current business ...
