

Desktop unplug power and battery to start

What happens when you unplug a computer and press the power button?

When you unplug a computer and press the power button, it discharges any power stored in the capacitors, like you say. I don't know why that would fix anything, though. See my expanded explanation. I think it has to do with discharging data from the BIOS state, however that is stored.

Why can't I boot desktop without removing battery?

Now restart your computer normally and check if you are able to boot desktop without removing battery. If you still face the issue, I would suggest you to update the drivers of your computer including the chipset drivers. In order to do this go to manufacturer's website and download the latest chipset drivers and basic drivers.

How do I fix a battery problem on Windows 10?

Method 1: Check the issue in safe mode. Boot to the desktop as you do, after that boot your computer to safe mode and check if the issue still persists in safe mode. Follow the steps given in the link below. Now restart your computer normally and check if you are able to boot desktop without removing battery.

Can I run a laptop without a battery?

If the input voltage for the power supply unit (PSU) does not match the correct setting for your country, your computer may not power on at all. Remove the main battery in the laptop or tablet and try using AC power only. Yes, it's perfectly fine to run your portable computer without the battery installed.

Why does my PC not start if I Disconnect from AC power?

You shut down windows using the operating system. Now, the PC power switch does not work. The PC will only start if you disconnect from AC power and reconnect to AC power. Is this correct? I would think you may have an external power supply problem because the power switch is working. It could be the switch.

Why is my laptop not powering on?

Verify that the power supply voltage switch is correctly set if you're on a desktop. If the input voltage for the power supply unit (PSU) does not match the correct setting for your country, your computer may not power on at all. Remove the main battery in the laptop or tablet and try using AC power only.

You may unplug any external devices, if any and check if the issue gets resolved. Method 2: Step 1: Safe mode. Boot your computer in safe mode and check for the issue. To start your computer in Safe mode. Step 2: Clean boot.
