

Fee Home Solar Power Purchase Price Inquiry

How much does home solar cost?

The average pre-incentive cost of home solar is \$29,161 for a three-bedroom house, or \$20,412 after claiming the 30% tax credit. However, as shown in the chart below, the number of bedrooms isn't a great indicator of the size and cost of a solar system - and neither is living space, for that matter.

How much do solar panels cost per square foot?

On average, solar panels cost \$8.77 per square foot of living space, after factoring in the 30% tax credit. However, the cost per square foot varies based on the size of the home. For example, the post-tax credit cost of solar panels for a 2,500-square-foot home is around \$20,000 for a rate of \$7.96 per square foot.

How much does solar installation cost?

According to the NREL data above, installation typically accounts for 5.5% of the total cost of a residential solar project, so this equation will get you a ballpark figure for labor costs. For example, if you receive a solar quote for \$25,000, you can expect labor to make up around \$1,375 of the all-in cost.

How much does a solar project cost?

For example, if you receive a solar quote for \$25,000, you can expect labor to make up around \$1,375 of the all-in cost. (Check out our solar calculator to estimate the cost of your project.)

How much does solar cost per watt?

To put that in perspective, using the modeled market price (MMP) of \$2.95 per Watt for residential solar, labor costs contributed just 16 cents per Watt of solar capacity installed. That's tied with structural balance of system (racking) for the second smallest piece of the solar cost pie, as shown below.

How much does a 5000 watt solar system cost?

A fully installed solar system typically costs \$3 to \$5 per watt before incentives like the 30% tax credit are applied. Using this measurement, a 5,000 Watt solar system (5 kW) would have a gross cost between \$15,000 and \$25,000. The price per watt for larger and relatively straightforward projects are often within the \$3-\$4 range.

A 6 kW solar system has the potential to save homeowners an average of \$1,346 per year on energy bills, which equates to approximately \$112 monthly. However, the exact savings can vary based on factors such as the ...
