

Households install solar panels on their roofs

Is it a good idea to install rooftop solar panels?

Rooftop solar panels can be a good opportunity for homeowners to save on electricity bills and cut carbon emissions. The cost of solar panels has plunged in the past decade, making it more affordable for homeowners like Ashley Reid, who installed solar panels on her home in Ontario a year and a half ago.

Can solar panels be installed on a wood roof?

Yes, solar panels can be installed on a wood or cedar roof. The process mainly involves drilling into a roof stud and slipping flashing under the wood pieces to prevent leaking.

Can solar panels be installed on a commercial roof?

Solar panels can be installed on just about any roof type, including commercial roofs. However, the installation process and mounting hardware might vary depending on the roof material.

Can solar panels be installed on metal roofs?

Yes, solar panels can be installed on metal roofs. Depending on the type of metal roof you have, installations will differ slightly. If you have a standing seam metal roof, your solar installer won't have to drill holes in your roof, as panel mounts can be clamped to the raised seams.

Why do you need a new roof & solar panel installation?

Streamlined process: Combining roof replacement and solar panel installation into a single project simplifies logistics and reduces overall disruption to the household. Optimal system integration: A new roof ensures proper fitting and sealing of solar panel mounts, reducing the risk of leaks or structural issues.

How do you replace a solar panel on a roof?

For homeowners who already have solar panels installed but need to replace their roof, the process involves a few additional steps: Contact the solar panel installer: They will need to remove the panels and mounting hardware before roof work can begin. Coordination with the solar installer is crucial to ensure minimal downtime for the solar system.
