

## Is it okay to replace non-original batteries with new energy ones

Can I replace my iPhone battery with a non-original battery?

Replacing your iPhone's battery with a non-original one can be safe if you go to a reputable third-party repair shop. Many people have done it and had positive experiences, but the thing is, non-original batteries might not perform as well or last as long as genuine Apple batteries. To help your new battery last longer, consider using a Chargie.

Should you replace batteries at the same time?

When replacing batteries in a device, it is best practice to replace the entire set of batteries at once. Mixing old and new batteries, even if they are from the same brand and type, can lead to uneven discharge and reduced overall performance.

Can you replace a battery with a non-original one?

I found a budget option to replace the battery with a non-original one. The store claims it's a 100% identical Chinese copy of the original Apple's battery. They give you a 12-month warranty as well. It's half the price of the original Apple battery.

Can I use old battery with new battery?

If you use old battery with new battery then it is harmful for new batteries. Battery power is not constant and reduce the new battery power too. This doesn't really answer the question.

Is it OK to use non OEM batteries?

Generally it is OK to use non-oem batteries so long as they produce the required energy levels and are from a reputable source. There is nothing inherently wrong with using aftermarket replacement batteries. For your question about what is causing that smell: we cannot tell.

Should you mix old and new batteries?

Mixing old and new batteries, even if they are from the same brand and type, can lead to uneven discharge and reduced overall performance. By replacing the entire set of batteries, you ensure that all batteries have a similar capacity, chemistry, and charge level, resulting in consistent performance and maximizing battery life.

Battery health reading is the only thing you'll lose. You could argue it lowers the resell value, but that's not super important to most people. No real feature loss, it hardly lowers resale value these days and you can still check the battery health with a tool like 3UTools.

Choosing between traditional batteries and rechargeable batteries depends on your own needs as well as your equipment. For example, when using a lot of controlled toys, gaming pads or small kitchen tools for batteries, you have to reckon with the fact that a new battery (or batteries) will be needed more quickly than later. On the other hand ...
