If the 12v battery is not at sufficient charge, then you cannot start the vehicle. The goal is to get the charge on the battery up enough to start the vehicle, which then will charge the 12v, unless it's defective, in which case it won't turn on or it will die shortly when the 12v won't hold the charge or take a new one.

Get a vehicle planning on things to fail. I will say that with the rate of battery price drops over the last ten years, and it will be an even more exponential drop over the next ten years due to so many companies sourcing them and driving down economies of scale, I think there is a nearly 0% chance of the battery being \$25k or even half that in 9 years. The only ...
