One battery plus one battery shutdown

How do I fix a laptop battery not working Windows 10?

Shutdown the laptop and remove the external battery. - Power on the laptop with the internal battery only without the AC cable. - Let it discharge (until you see that some magic happened) and the battery 1 appeared in Windows. - Go to Device Manager > Battery > and uninstall all devices. Reboot - After reboot check if Windows sees the battery.

How do I know if my Lenovo ThinkPad has dual batteries?

After reboot check if Windows sees the battery. If it does, shutdown the laptop and pop in the external battery. - Now you should see both batteries in the power menu. Good luck, and love your Thinkpad ! This answer is hard to determine. Thinkpad T450s (2014) Win7, dual batteries.

How do I know if a powercfg battery is shutdown?

Run a PowerCfg Battery report to find out the ratio of Full charge capacity to Design capacity. The syntax is PowerCfg /batteryreport/output "C:\Users\%UserName%\Desktop\BatteryReport.html" /Duration 1 View attachment 80213 3 If it is shut down then it is shutdown; S0 Modern standby or not.

What can I look for mine to make sure the laptop actually shuts down and not entering some sort of sleep/standby state? I disabled C state CPU in BIOS. Have you updated ...

What can I look for mine to make sure the laptop actually shuts down and not entering some sort of sleep/standby state? I disabled C state CPU in BIOS. Have you updated the battery drivers? See Top Fixes if Your Windows Laptop battery is Draining After Shut Down - NEXTOFWINDOWS . Hello everyone.

In my case, the laptop will experience abnormal battery drain if I completely shutdown the laptop with 70% or less battery. 71% or higher, I can shutdown the laptop normally without risking complete battery drain on next boot. For clarity, I have performed the below to diagnose and attempt repair: Replaced the battery with an OEM replacement

If I update my Multi to the newest firmware I could use the new feature "SOC-low-shutdown". In past I used to take the BMV-relais for that, but now I am wondering if this would also be ...

Turn off Fast startup in Additional Power Options. Fast Start prevents a complete shutdown so it can startup faster. See this about laptop safety-- FAQ - Laptop battery articles - Dell Community

If I update my Multi to the newest firmware I could use the new feature "SOC-low-shutdown". In past I used to take the BMV-relais for that, but now I am wondering if this would also be possible with a software solution. In VEConfig I have to enable the battery monitor of the multi to use this feature. So the question now is:

One battery plus one battery shutdown

Currently, the MultiPlus II is constantly shutting off with a low battery warning and then restarting and shutting off again. My batteries are fully charged - confirmed with multimeter, the battery"s app, and a lithium charger. Any ideas of what is causing this? I ...

Just recently I have noticed that one of the two batteries, drains completely while the other remains full. There are no physical fuses nor breakers blown, and I can not find ...

???: kernel-/drivers/power/supply/mediatek/battery/mtk_power_misc.c mtk_power_misc_psy_event({ if (tmp >= BATTERY_SHUTDOWN_TEMPERATURE) { bm_err("battery temperature >= %d,shut. mtk ??Fuel Gauge ?? ???????? ?? ?????

Currently, the MultiPlus II is constantly shutting off with a low battery warning and then restarting and shutting off again. My batteries are fully charged - confirmed with ...

In my case, the laptop will experience abnormal battery drain if I completely shutdown the laptop with 70% or less battery. 71% or higher, I can shutdown the laptop normally without risking ...

So this is how I solved it: - Shutdown the laptop and remove the external battery. - Power on the laptop with the internal battery only without the AC cable. - Let it discharge (until you see that some magic happened) and the battery 1 appeared in Windows. - Go to Device Manager > Battery > and uninstall all devices. Reboot.

I will use an "ABB sace tmax" on the 48V battery side. This is controlled with a small relay current for triggering. Now the question is whether I should only separate plus or plus and minus at the same time? Which solution would be better for Multiplus, Quattro.

Just recently I have noticed that one of the two batteries, drains completely while the other remains full. There are no physical fuses nor breakers blown, and I can not find any settings in either the Victron nor the JKBMS that would cause this.

???: kernel-/drivers/power/supply/mediatek/battery/mtk_power_misc.c mtk_power_misc_psy_event({ if (tmp >= BATTERY_SHUTDOWN_TEMPERATURE) { ...

It reboots fine and runs off the removable battery as normal. Have deleted battery drivers and reinstalled, have updated bios, and have upgraded from windows 10 to 11. Is there any way to ...
