

One year battery 85

How long can a battery last?

Of course there are going to be variables in this calculation that change the result. If you don't go through your entire battery every day, charge primarily using lower power adapters, and so on, you might be able to go for three years before the battery health ends up at 80%.

Is battery health normal after 12 months?

Battery Health normally declines an average of about 1% a month over longer periods. So, it would be normal to expect that your Battery Health would be about 88-90% after 12 months (1 year). Your battery is doing better than average, so nothing to be concerned about here. If anything, you should be happy. I bought a new iPhone before 12 months.

How long does a lithium ion battery last?

Lithium ion batteries want to be kept between 40-80% at all times. Do this and your battery health will last much longer. I've had my iPhone 12 for 13 months now and battery health is still 97% for this reason. It really works! My iPhone battery health is 88% after 10 months.

How long does the battery last on a launch day iPhone 13 Pro?

My iPhone 13 Pro has been charged on a MagSafe charger almost every night and is at 100% capacity. If a person is careful how they charge and discharge the phone, the battery can still have over 90% battery health after 6 years of constant daily use. If a person abuses the battery, it can be toast in less than 2 years.

What is the battery health score?

The battery health is still @100%. Gotta remember that a battery that has a health score of 70% is toast in the respect that it's pretty useless. That being so, figure 70% is really essentially zero. So you've only got 30% points from new to toast to deal with.

How long does a laptop battery last?

Batteries are a consumable item and they degrade over time. Hence the one-year default battery warranty. 83% after a year is in the normal use range. The default BIOS charging setting is primarily on AC to best maintain the battery on computers that are usually powered on AC.

Optimize Battery Charging: Enable the "Optimized Battery Charging" feature on your iPhone. It helps reduce the wear on the battery by slowing down the battery aging process. You can find this option in Settings > Battery > Battery Health.

Under typical circumstances, car batteries last between three to five years. However, it is entirely possible for a car battery to fail after just one year. A variety of factors can lead to such premature battery degradation, impacting the performance and reliability of your vehicle. External conditions play a significant role in a

battery"s lifespan. Extreme ...

I'm using iPhone 13 since 1 year and my battery health is 92% right now. Excellent. Battery Health normally declines on average at about 1% a month, so it would be normal to expect that your battery would be at about ...

Yes, expect that replacement will likely be a good within a year. It may be a good idea to set max charge level to 90% or 80%. In general if you want your battery to last a long time and you're connected to AC most of the time you should limit ...

Yes, having 85% battery health after 1 year is generally considered to be OK. ...

I think with most people"s usage patterns you can expect the battery to lose about 7-10% of its health with every year of use, so that you end up with 80-85% battery health left after two...

I've had my MacBook Pro 14 for about a year and recently checked its battery health. It"s showing that the maximum capacity is down to 85% after around 150 cycles. Is this within the normal range of battery degradation, or should I be ...

After using nearly one year, the battery"s maximum capacity of my MBA M1 is still 100%. ... What"s the criteria to have Apple replace the battery? Feel like I'm at 70~ cycles and 85% max. Seems dramatic to me
Reply reply FireInDaHall o I think it"s one year 80%. Reply reply More replies More replies More replies.
ahsol360 o Do you keep it plugged in most of the times? ...

I've had my MacBook Pro 14 for about a year and recently checked its battery health. It"s showing that the maximum capacity is down to 85% after around 150 cycles. Is this within the normal range of battery degradation, or should I be concerned that it"s deteriorating too quickly? With coconutBattery it"s showing me even 79% Design Capacity.

My 12 Mini is around 2 years old...and my battery health is at 89%. There is a way to calculate how much battery capacity your particular battery has...and a lot of times...it"s got more than what the packaging says. Some batteries were at 104%. That"s why some batteries take a long time for it to drop from 100 to 99% battery health.

Battery Health normally declines on average at about 1% a month, so it would be normal to expect that your battery would be at about 88% after one year. Your battery performance is excellent. Show more Less. Reply. ...

Yes, having 85% battery health after 1 year is generally considered to be OK. The battery capacity naturally decreases over time, and an 85% battery health should still provide decent performance for your iPhone.

One year battery 85

I was checking the battery health and found that from Dec 2019 to January 2020 (to date), the battery capacity has declined from 88% to 85%. Is it quite normal to have a battery with 85% of capacity after 16 months of use? And a 3% battery capacity decline in roughly a month is symptomatic of any issue? I use the apple provided ...

I'm using iPhone 13 since 1 year and my battery health is 92% right now. Excellent. Battery Health normally declines on average at about 1% a month, so it would be normal to expect that your battery would be at about 88% after one year. Your battery performance is excellent.

Is iPhone battery health 85% after 1 year? Apple considers any iPhone with a battery capacity of 80% or above to be in optimal condition. In fact, Apple feels so strongly about battery health that its 1-year warranty covers any battery at 80% capacity or more.

It was down to 85% after <1 year, around 70 cycles, and Apple support essentially told me to kick rocks unless it hit less than 80% (it never did, only drifted above). Someone I talked to even said "It's not unheard of to happen" ...
