

Smart storage cannot detect batteries

Loss of a disk in a RAID0 setup will cause that logical drive to fail. Aside from that issue, you have a problem with the server's Smart Storage Battery. In many cases, array acceleration and some other critical features rely on that battery to function properly.

Yesterday, I noticed in the Smart Storage Administrator Software several warnings : * the first is a fatal error (code 351) saying there is a state problem detected in the cache. But I think this problem is due to the second warning. * the second is a warning (code 263) saying I have a battery or condensator that has failed.

I am working on a DL380 gen9 on a client's site and the cache battery is presenting the following error in iLO: Smart Storage Battery has exceeded the maximum amount of devices supported (Battery 1, service information: 0x07). Action: 1. Remove additional devices. 2. Consult server troubleshooting guide. 3. Gather AHS log and contact Support

The IML shows the Array Storage Battery is failed. From the documentation I can find, apparently this should not cause the server to just up and reboot. It's taking down ...

The battery technology progress has been a contradictory process in which performance improvement and hidden risks coexist. Now the battery is still a "black box", thus requiring a deep understanding of its internal state. The battery should "sense its internal physical/chemical conditions", which puts strict requirements on embedded sensing parts. This ...

The IML shows the Array Storage Battery is failed. From the documentation I can find, apparently this should not cause the server to just up and reboot. It's taking down some 10 VM's in the process including my IP phone system. Anyone see this happen if one of these storage batteries needs replaced? DMESG in Proxmox and the IML Logs don't ...

313-HPE Smart Storage Battery 1 Failure - Battery Shutdown Event Code: 0x0400. ???AHS???400-810-0504-3-2??? ?????????????????? Redundant ROM Detected - This system contains a valid backup system ROM HE SmartMemory authenticated in all populated DIMM slots Starting drivers. Please wait, this may take a few ...

I am working on a DL380 gen9 on a client's site and the cache battery is presenting the following error in iLO: Smart Storage Battery has exceeded the maximum amount of devices supported ...

If you see text stating your device is working properly, then your battery is fine and the "no battery detected" bug is likely caused by something else. If you don't see this message, your battery could be damaged and you may need to replace it; this is likely the case if it's an old laptop -- after all, laptops batteries don't last forever

Smart storage cannot detect batteries

Smart electrochemical energy storage devices are devices that can operate autonomously to some extent. Although the conventional electrochemical energy storage devices, e.g., the commonly used ...

Doing that will allow the UPS to detect the battery inside and monitor its status. Read: How To Check UPS Battery Health? Battery Is Worn-Out Or Faulty. What it is: A typical backup battery that you'd find in an APC UPS will last between 3-5 years.As the battery approaches the end of that lifespan, it'll display many signs of wear, like a gradual drop in ...
