How should solar energy capacity be sized?

rating of the solar system. Energy capacity should be sized based on the economics of storing energy versus the cost of additional storage capacity, i.e., the value of additional solar kilowatt-hours directly consumed over the life of the storage system versus the upfront cost of purchasing additional ba tery system kilowatt-hours. Storage s

What are the components required in a solar PV microgrid system?

1.5.5. Balance of System (BOS) In addition to the PV modules, battery, inverter and charge controller there are other components required in a solar PV microgrid system; these components are referred to as Balance of Systems (BoS) equipment.

What are the metering requirements for solar+storage systems?

pt from these restrictions.METERING REQUIREMENTS: For solar+storage systems designed to participate in net energy metering or other programs where utility bill credits are earned for solar energy produced or exported to the grid,additional metersmay be required by the utility to track and verify that only solar energ
