How much does a battery electric vehicle cost in 2023?

For battery electric vehicle (BEV) packs, prices were \$128/kWh on a volume-weighted average basis in 2023. At the cell level, average prices for BEVs were just \$89/kWh. This indicates that on average, cells account for 78% of the total pack price. Over the last four years, the cell-to-pack cost ratio has risen from the traditional 70:30 split.

How much does a square LFP battery cost in China?

China's initial power battery specifications referred to the VDA standard. With the exception of short blade cells, most square cells in China are VDA size, with ample production capacity and fierce price competition, 36kr's report noted. The average price of square LFP cells at the same time last year was around RMB 0.8 to RMB 0.9 per Wh.

How much does a lithium ion battery cost in 2023?

In 2023, lithium-ion battery pack prices reached a record low of \$139 per kWh, marking a significant decline from previous years. This price reduction represents a 14% drop from the previous year's average of over \$160 per kWh.

Why are lithium-ion batteries so expensive?

The cost of raw materials, particularly lithium carbonate, plays a significant role in the pricing of lithium-ion batteries. The recent decrease in lithium prices has been a major factor in lowering battery costs. As lithium is a key component in these batteries, fluctuations in its price directly impact the overall cost of battery production.

How will Lithium prices affect EV battery prices in 2023?

Effect on Battery Prices: The decrease in lithium prices is expected to further lower the prices of lithium-ion batteries, continuing the trend observed in 2023. In June 2024, the average prices for EV battery cells saw a decrease: Square Ternary Cells: Priced at CNY 0.49 per Wh, down 2.2% from May.

How much does an EV battery cost?

That's a huge drop in battery cost. The report says that a kilowatt-hour of usable EV battery capacity costs about \$139 in 2023, and using 2023 constant dollars, it was \$1,415/kWh in 2008. The estimate was calculated for production at a scale of at least 100,000 battery packs per year.
