A photovoltaic (PV) system is an electrical setup designed to harness energy from the sun and convert it into electricity. This system typically includes solar panels, an inverter, and other electrical components that work together to generate and deliver electricity to either the power grid or directly to end users.

At best estimates with a highly performing solar-powered system, consumers could save around EUR1,500 per year on average on their energy bills, according to research carried out by Solar Index Italy. That means most systems are estimated to pay for themselves within 5-7 years, depending on the type you opt for.

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a ...
